

BASAVARAJ BIRADAR

+91 9019704143 | Karnataka, India | basavarajbiradar255@gmail.com | linkedin.com/in/basavaraj-biradar

OBJECTIVE

Creative and self-motivated aspiring Front End Developer eager to start a professional journey. Proficient in core web technologies and passionate about building responsive, user-centric applications. Detail-oriented with excellent time management and communication abilities.

EDUCATION

Bachelor of Technology — Presidency University

2023 – 2027

CGPA: 7.95

Pre-University — Shree Guru Independent

2020 – 2022

Percentage: 89%

SKILLS

Technical: Java, Python, JavaScript, HTML5, CSS3, OOPS (Object-Oriented Programming), DSA (Intermediate), Operating Systems.

Frameworks & Libraries: React, React Native, Node.js, Express.js, Flask

Tools & Practices: Git, GitHub, REST APIs, Responsive Web Design

Databases: SQL, MySQL, MongoDB

Soft Skills: Communication, problem-solving, teamwork, adaptability, leadership, and time management.

EXPERIENCE

Python Developer Intern

June 2025 – July 2025

CODEC Technology · Bengaluru, Karnataka, India

- Built backend services and automation scripts in Python for AgriTrackX, a full-stack agricultural tracking application, integrating seamlessly with the existing MERN (MongoDB, Express.js, React, Node.js) stack.
- Developed and deployed Python (Flask) microservices and RESTful API endpoints to handle data validation, crop/inventory record processing, and real-time syncing with a MongoDB database.
- Automated data cleaning, CSV import/export, and analytics reporting with Python scripts, reducing manual effort and improving accuracy and turnaround time for inventory and yield tracking.
- Collaborated cross-functionally with the front-end team using Git-based version control to integrate Python services with the React/Node.js application, supporting secure, real-time tracking dashboards.

PROJECTS

AgriTrackX. Built a full-stack, responsive agricultural tracking application using React Native, JavaScript, Node.js/Express, and MongoDB, with Python-based backend scripts for data processing and automation. Enables farmers and internal teams to track crop cycles, inventory, and yield data in real time through a secure REST API and mobile/web interface.

Mobile App (Java, Maven). Developed the front-end for a user-friendly mobile application using Java and object-oriented programming (OOPS) principles, managed with Maven for dependency and build management. Designed a clean, icon-based navigation UI to improve usability, and connected the front-end to backend services via Git version control for a smooth, responsive user experience.

AI-Driven Micro-Rejuvenation Framework. Reconstructed and implemented a PyTorch-based LSTM deep learning pipeline from a research paper to model and predict micro-rejuvenation patterns from time-series data. Set up and debugged the full local environment on Windows, resolving PyTorch installation and DLL dependency issues, and migrated the workflow into Jupyter Notebook for iterative experimentation, model training, and result visualization.

CERTIFICATIONS

- Online Courses & Certifications: Completed the Python Course for Beginners: Mastering the Essentials on SCALER.
- CODEC Technologies: Certified for completion of the Python Developer Internship, AICTE-approved, recognizing hands-on experience building backend services for AgriTrackX.
